PRINTING

SCREEN PRINTING

WHY CHOOSE SCREEN PRINTING?

Screen printing is the most traditional, and at NextGen we believe most skilled, method of printing garments. Few companies use this technique because the process is very specialist and requires highly experienced printers to achieve perfect results.

Screen printing is great for large area prints and offers a low-cost option when you need large quantities of product. Screen printing is good for detailed logos or designs, offering a long-lasting design that can be Pantone colour matched for precision.

HOW IT WORKS

Designs for screen printing must be split into separate colours, using programs such as Adobe Illustrator or Corel-Draw. Each colour is stencilled onto its own mesh screen using light reactive chemicals. The stencil forms very fine 'open' areas on the mesh. The screen is positioned over the garment in the desired print position. Then, wet ink is placed on top of the screen and the ink is spread across the screen using a squeegee. This forces it through the 'open' areas of the mesh, resulting in a printed version of the stencil on the garment. Once heated, the ink is permanently cured on to the clothing

SUBLIMATION

WHY CHOOSE SUBLIMATION?

Sublimation provides a smooth finish on light-coloured synthetic fabrics such as polyester and acrylic. It offers a fantastic print life, practically lasting forever. Sublimation is great for detailed logos and designs because there's no limit to the number of colours you can use. It's also good for smaller orders as there's no minimum order quantity.

HOW IT WORKS

If you choose sublimation, your design will be printed onto transfer paper using special ink toners. The transfer paper is then placed on the garment and heat pressed, which turns the ink into gas. Under pressure the gas particles merge with the garment fibres, providing a softer, smoother finish than prints that lie on top of the garment.

SERVICES

PRINTING

VINYL CLAD CUT

WHY CHOOSE VINYL CLAD CUT PRINTING?

Vinyl clad cut printing is an affordable way to print even the smallest of quantities. There are no set-up costs involved (unless your artwork needs rewriting) and the process is fast and low-cost. Only solid colours can be printed using this method and logo colours are more limited, but we can print on any colour garment. This method is particularly cost effective for small to medium quantities and won't fade over time.

HOW IT WORKS

To begin the vinyl clad cut process, we add an outline to the logo or text using Adobe Illustrator or CorelDraw. This is then printed through a digital cutter, which cuts the design onto a single-colour sheet of material such as vinyl, flock or foil. Once printed, we use a process known as weeding to pick out the excess vinyl by hand. After the uncut areas are removed, the remaining sections are applied to the garment using a commercial heat press and silicone paper.

DIGITAL TRANSFER PRINT

WHY CHOOSE DIGITAL TRANSFER PRINTING?

Digital transfer printing delivers the highest quality precision imaging, almost to a photographic level. The maximum resolution for digital transfer printing is 1440 x 720 dpi, so it's a great printing method for detailed logos and designs. With no set-up costs (unless the artwork needs rewriting), it's also ideal for producing outstandingly smooth and accurate coloured designs on low order runs.

HOW IT WORKS

If you choose digital transfer printing, your design will be sent to a digital printer using a software program such as Adobe Illustrator or CorelDraw. The design is then printed onto white material and an integral electronic cutter is used to cut around the print. The print is heat pressed onto the garment using a commercial heat press and silicone paper.

SERVICES

PRINTING

HEAT SEAL TRANSFER PRINTING (LASER)

WHY CHOOSE HEAT SEAL TRANSFER PRINTING?

Heat seal transfer printing - also known as laser printing - provides a long-lasting finish that won't fade over time. It can only be used on white garments but is a great option for printing multiple print colours. Heat seal transfer printing is a cost-effective printing method and, so long as the artwork doesn't need rewriting, comes with no set-up costs. It can be used for detailed designs and logos, with high quality logos providing high quality prints.

HOW IT WORKS

Heat seal transfer printing takes high-resolution images and prints them on commercial-quality transfer paper, using industry-standard formats such as BMP, TIF, GIF and JPEG. The higher the quality of image provided, the better the result. The transfer paper is applied to the garment using a commercial heat press and silicone paper.

DTG PRINTING

WHY CHOOSE DTG PRINTING?

Direct to Garment (DTG) printing is the latest addition to the printing options we offer. A recent innovation in garment printing, DTG printing prints directly on to the garment and can handle complex designs in any colour. DTG printing can be used on both light and dark garments and is best for small to medium order quantities.

HOW IT WORKS

If you choose DTG printing, a DTG printer will print your design directly onto your chosen garments. Our high tech DTG printer is like an inkjet printer and provides a fast and precise finish.

PAD PRINTING

WHY CHOOSE PAD PRINTING?

Pad printing is most often used to print 2D images onto 3D objects. This makes it an ideal printing method for printing on irregularly shaped items such as hard hats.

HOW IT WORKS

Pad printing uses an offset gravure printing process, which transfers the image onto the item via a silicone pad.

SERVICES

EMBROIDERY

WHAT IS EMBROIDERY

NxtGen's custom embroidery service offers a high quality and long-lasting customisation method. Embroidery is one of the two branding methods we offer our customers. When a customer chooses embroidery, we take their design and recreate it using high quality stitching. We then sew their logo or design onto their chosen garments using our five 6-head Brother industrial machines in our Essex offices. These high-tech machines can provide a professional looking and durable result on all types of clothing.

EMBROIDERY REQUIREMENTS

Embroidery is an intricate process, but we can usually work from a JPEG image format if you do not have any others available.

Unlike printing, where the design is transferred directly to the garment, our embroidery team will need to recreate your design for stitching. To do this, we use a computerised system and high-tech embroidery machines. This ensures consistently high quality on every garment and makes it possible for us to work with intricate designs.

Our embroidery products are competitively priced and offer great value for money. The total cost will be based on stitch count, which means it will be different for every logo or design and depends on both its size and intricacy. Our sales team will be able to provide a quote for your order after seeing your logo.

BENEFITS OF EMBROIDERED LOGOS AND DESIGNS

Embroidery is the most popular branding method among our customers because it looks great on our range of garments and provides a long-lasting finish. The end result is a high-quality product that looks exactly the way you envisioned.

We are proud to welcome many of our customers back time and time again because they know that they can expect a great product from us. We'll do everything we can to make the process as easy and convenient as possible, so you won't waste any time or money. Our embroidered garments are available in multiple colours with no additional cost, so you won't be restricted by cost or availability.

NxtGen

SERVICES

EMBROIDERY

IS MY PRODUCT SUITABLE FOR EMBROIDERY?

Embroidery is suitable for most products but can be difficult for smaller text. Graduated colour can also be hard to achieve. We will provide you with a quote and any recommendations when you contact us for a consultation

OUR EMBROIDERY PROCESS

Our embroidered garments are produced in-house, meaning we have complete control over the entire order and production process. Once we receive your logo or design, we will redraw it in a format that can be read by our high-tech embroidery machines. This process is known as digitisation. Depending on how complicated and detailed the logo is, there may be a set up charge for this process.

Before we begin embroidering your garments, we always provide an embroidery proof. This means you can see exactly how your finished design will look and make any alterations if they are needed.

Once you have seen and approved the embroidery proof, our in-house team of highly experienced embroiderers will use our industrial Brother machines to sew your design on to the garments you have chosen.

BESPOKE GARMENTS

BESPOKE CLOTHING

With NxtGen's bespoke garment service, the only limit is your imagination. Whatever you envision for your branded garments, our team can help you make it come to life.

Our range of bespoke products is just as varied as our selection of off the shelf products. We offer all kinds of garments through our bespoke design service, including polo shirts, sweatshirts and t-shirts. As well as these, we can also design custom accessories such as ties and scarves.

Our Essex-based team works closely with factories in the UK and overseas to create bespoke garments that aren't available anywhere else. Because of this, the lead times for bespoke products will be a little longer - but we promise it will be worth the slight wait. When you order bespoke, you'll receive a high-quality product that's completely unique to your business and can help put across a strong brand message.

You'll have complete control over every aspect of your garments when you use our bespoke service. This includes everything from selecting the perfect fabric, with the exact colours and composition you'd like, to designing the final style and fit. No aspect will be overlooked, and you will also be able to include personalised clothing labels and packaging if you wish.

MINIMUM ORDER QUANTITIES FOR BESPOKE PRODUCTS

Due to the nature of the product, our bespoke garments usually come with a minimum order quantity of between 1,000 and 4,000 units. This means that many of our bespoke items can be more cost-effective than our standard stock items.

If you need fewer units than this, our scarves and ties are available with a minimum order quantity as low as 50. As with all our services, our team will work with you at every step of the process to make sure the final product is exactly as you envisioned.

BESPOKE GARMENTS

HOW TO ORDER BESPOKE GARMENTS

If you'd like to order a bespoke design and create a one of a kind product for your business, we've made the process as simple as possible.

To get started, we will need a technical specification or design from you. If you don't have this but you have examples on which you'd like to base your garments, you can send those to us too.

Once we have these, we will put together our recommendations. We will produce a quote, taking fabric options, sizing and branding requirements into consideration.

Due to the nature of the product and the fluctuating costs of raw materials, we may need to issue a new quote if you're not ready to go ahead with the order within a set time frame.

Once you're happy with everything, NextGen will provide proofs and design drawings for you to approve. After we have your feedback on these, we will also provide a pre-production sample for you to see how the final product will look. Any alterations you would like can be made at this point. These often include minor adjustments to the logo position or the colours to make sure everything is just right.

If you need to make any adjustments, the product will be re-sampled for final approval. Order times can vary depending on the complexity and quantity of products ordered, but you can then expect your final product to be with you in around 90-120 days.

TOP-UP ORDERS FOR BESPOKE CLOTHING

When ordering additional bespoke products, please keep in mind that top-up orders may come with the same minimum order quantity (usually 1,000-4,000 units) as the original products. Even though we always do our best to find ways to deliver exactly what our customers would like, this means we may not be able to fulfil smaller orders of bespoke items.

Once we have seen the garment specification, we will be able to let you know if top-up orders will be possible. If it isn't possible, you may want to consider ordering extra garments when placing your first order.
